Application/Control Number: 10/002,138

Art Unit: 1711

1. Claims 12 and 13 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 12 and 13 are onfusing because they should be stating properties of the polymer made from the cured oligomer. It's not possible for the oligomer to have tensile and elongation properties. Claim 12 is confusing because no units are stated for the tensile strength.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or (2) a patent granted on an application for patent by another filed in the United States before the

invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

3. Claims 1-13 are rejected under 35 U.S.C. 102(e) as being anticipated by Leach.

Leach discloses urethane (meth)acrylate oligomers made by reacting polyols with low amonts of unsaturation (see examples) with polyisocyanates and hydroxylated (meth)acrylate (col. 5, lines 25-26). At the bottom of col. 1, he discloses using Acclaim polyether polyols, which are made in the presence of a double metal cyanide catalyst. The examples show the same tensile and elongation properties as specified in the

Art-Unit: 1711

claims. The viscosity would be inherent because the oligomers of Leach are the same as those of the claims.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Rachel Gorr whose telephone number is (703) 308-3608. The examiner can normally be reached on Mon.. Tues., Thurs., Fri.. from 7:00-5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jim Seidleck can be reached on (703) 308-2462. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 872-9310 for regular communications and (703) 872-9311 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0661.
